

FROM THE DESK

SUMEEET WALIA
Chairman,
Leading India
into Industry 4.0

Dear Reader,

At CII - Tata Communications Centre for Digital Transformation our constant endeavour is to evolve the digital movement that is transforming India. The centre is doing so by building systems of intelligence and helping organisations adopt smart solutions to reinvent their productivity and business processes.

In this edition, we marvel at this exciting era where Indian firms are seizing the future with the transformative power of digital technologies like AI, ML, data analytics, etc. We would also like to specifically draw your attention to digital transformation in the Indian manufacturing sector i.e. the Industry 4.0 revolution. One example that is impressive in scale and impact is the digital transformation at Robert Bosch Engineering & Business Solutions. We also look at a couple of interesting case studies in this space viz. Hero MotoCorp and Varroc.

We had highlighted the importance of cybersecurity in our last edition. The centre continues to underline its commitment to the same with the latest initiative being a Cyber Security Workshop which was conducted on 26th - 28th Sept.

It would be great to listen to your thoughts on digital transformation and how your organisation is approaching the same in terms of readiness, initiatives and adoption.
